PART I

1. Lists Lists are easily to create:

- List entries start with the `\item` command.
- Individual entries are indicated with a black dot, a so-called bullet.
- The text in the entries may be of any length.

2. Numbered (ordered) lists are easy to create:

1. Items are numbered automatically.
 2. The numbers start at 1 with each use of the `enumerate` environment.
 3. Another entry in the list
3. Description Environment

This is an entry *without* a label.

Something short A short one-line description.

Something long A much longer description. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

4. Labels Change the labels using `\item[label text]` in an `itemize` environment

- This is my first point
- Another point I want to make
- ! A point to exclaim something!
- Make the point fair and square.

NOTE This entry has no bullet

A blank label?

5. Nested Lists

1. The labels consists of sequential numbers

- The individual entries are indicated with a black dot, a so-called bullet
 - The text in the entries may be of any length
- Note:** I would like to describe something here
- Caveat!** And give a warning here

2. The numbers starts at 1 with each use of the `enumerate` environment

6. Nested Lists: Label Style

1. First level item

2. First level item

(a) Second level item

(b) Second level item

i. Third level item

ii. Third level item

A. Fourth level item

B. Fourth level item

7. Nested itemize lists: bullet style

• First level item

• First level item

– Second level item

– Second level item

* Third level item

* Third level item

- Fourth level item
- Fourth level item

PART II Customizing Lists

1. One
2. Two
3. Three
 - 3.1 Three point one
 - 3.1.1 Three point one, point one
 - 3.1.1.1 Three point one, point one, point one
 - 3.1.1.2 Three point one, point one, point two
4. Four
5. Five

```
\newcounter{foo}
\setcounter{foo}{5}
```

- `\arabic{foo}` produces 5
- `\roman{foo}` produces v
- `\Roman{foo}` produces V
- `\Alph{foo}` produces E
- `\alph{foo}` produces e

1. A duck
2. More ducks
3. A flurry of ducks
 - 3.1 Ducks and eggs
 - 3.1.1 Do I see...
 - 3.1.2 Ducks and pre-ducks
 - 3.1.2.1 Awww...
 - 3.1.2.2 So cute!
4. Back to ducks
5. Again

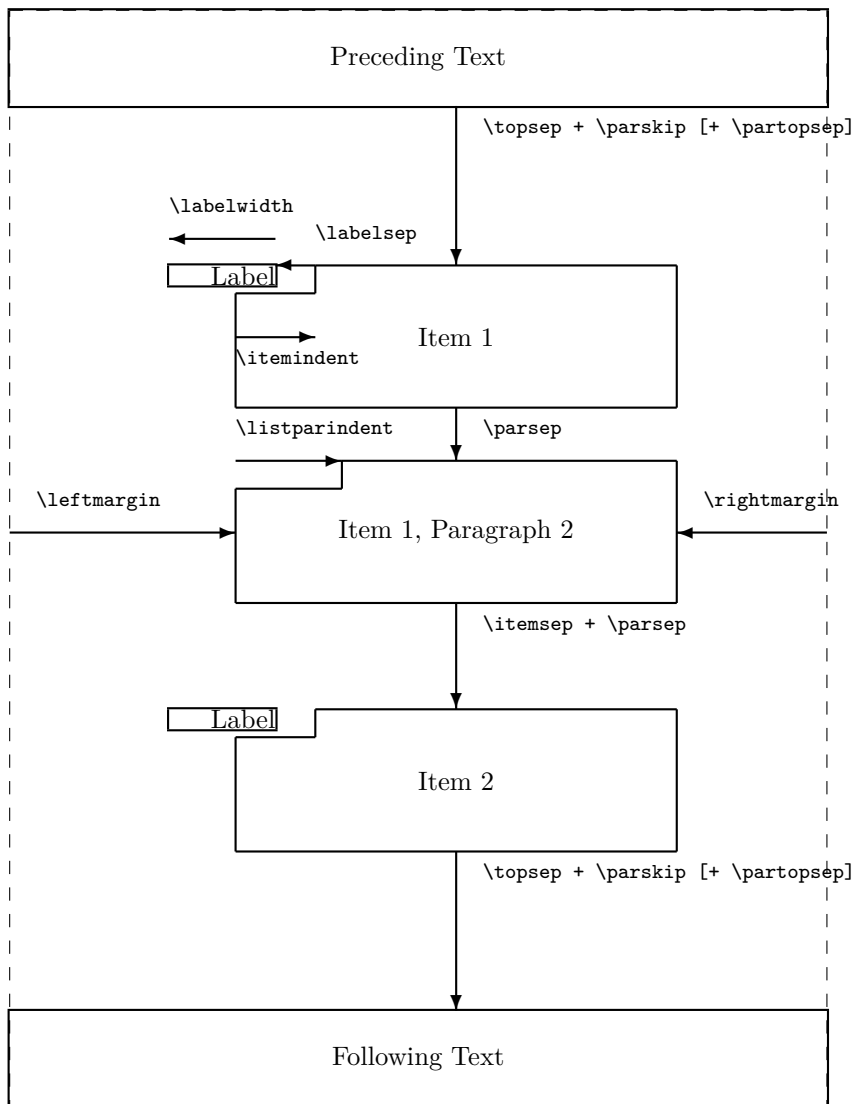

Figure 1: The $\text{\LaTeX}$ parameters which define typesetting and layout of lists.

Hello, here is some text without a meaning. Hello, here is some text without a meaning. Hello, here is some text without a meaning.
