

Simple molecules

- Water: `\ce{H2O}`, H_2O
- Benzene: `\ce{C6H6}`, C_6H_6
- Hydrogen peroxide: `\ce{H2O2}`, H_2O_2
- Acetic acid: `\ce{C2H4O2}`, $\text{C}_2\text{H}_4\text{O}_2$
- Glucose: `\ce{C6H12O6}`, $\text{C}_6\text{H}_{12}\text{O}_6$

Chemical equations

Two basic examples:

- `\ce{2H2 + O2 -> 2H2O}` typesets $2\text{H}_2 + \text{O}_2 \longrightarrow 2\text{H}_2\text{O}$
- `\ce{CO2 + C -> 2 CO}` typesets $\text{CO}_2 + \text{C} \longrightarrow 2\text{CO}$

A more complex example

Writing `\ce{Hg^{2+} ->[I-] HgI2 ->[I-] [Hg^{II}I4]^{2-}}` typesets this:

A math mode example

Chemical expressions can be typeset using math mode commands such as `\frac`.

Writing `\[K=\frac{\[\ce{Hg^{2+}}\]\[\ce{Hg}\]}{\[\ce{Hg2^{2+}}\]}\]` produces this:

$$K = \frac{[\text{Hg}^{2+}][\text{Hg}]}{[\text{Hg}_2^{2+}]}$$
