

Let's start with an example which typesets two centred paragraphs by writing them inside a center environment. Note how a new paragraph is started by inserting a blank line between them although that's a commonly-used method, it's not the only way to start a new paragraph.

Example 1: The following paragraph (given in quotes) is an example of centred alignment using the center environment.

“LaTeX is a document preparation system and document markup language. LaTeX uses the TeX typesetting program for formatting its output, and is itself written in the TeX macro language. LaTeX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (TeX macros) which form the markup conventions used to typeset LaTeX documents.”
