Let's start with an example which typesets two centred paragraphs by writing them inside a center environment. Note how a new paragraph is started by inserting a blank line between them although that's a commonly-used method, it's not the only way to start a new paragraph.

Example 1: The following paragraph (given in quotes) is an example of centred alignment using the center environment.

“LaTeX is a document preparation system and document markup language. LaTeX uses the TeX typesetting program for formatting its output, and is itself written in the TeX macro language. LaTeX is not

the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.”

This is text contained in the first paragraph. This is text contained in the first paragraph. This is text contained in the first paragraph.

This is text contained in the second paragraph. This is text contained in the second paragraph. This is text contained in the second paragraph. This is text contained in the second paragraph.

A paragraph typeset flush left

LaT_EX is a document preparation system and document markup language. L^AT_EX uses the T_EX typesetting program for formatting its output, and is itself written in the T_EX macro language. L^AT_EX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.

A paragraph typeset flush right

LaT_EX is a document preparation system and document markup language. L^AT_EX uses the T_EX typesetting program for formatting its output, and is itself written in the T_EX macro language. L^AT_EX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.

A fully justified typeset paragraph

L^AT_EX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.

A paragraph typeset using `\raggedright`

L^AT_EX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.

A paragraph typeset using `\raggedleft`

L^AT_EX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.

A paragraph typeset using `\centering`

L^AT_EX is not the name of a particular (executable) typesetting program, but refers to the suite of commands (T_EX macros) which form the markup conventions used to typeset L^AT_EX documents.

This is a section

First paragraph of a section which, as you can see, is not indented. This is more text in the paragraph. This is more text in the paragraph.

Second paragraph. As you can see it is indented. This is more text in the paragraph. This is more text in the paragraph.

Third paragraph. This too is not indented due to use of `\noindent`. This is more text in the paragraph. This is more text in the paragraph. The current value of `\parindent` is 20.0pt. This is more text in the paragraph.

A new paragraph with some text, then an `\indent` command. Next, some inline math which also has an indent $y \quad x$. `\indent` also works when used in an `\hbox` such as `\hbox{A\indent B}` which produces A B.
