

First example is 2D and 3D math expressions plotted side-by-side.

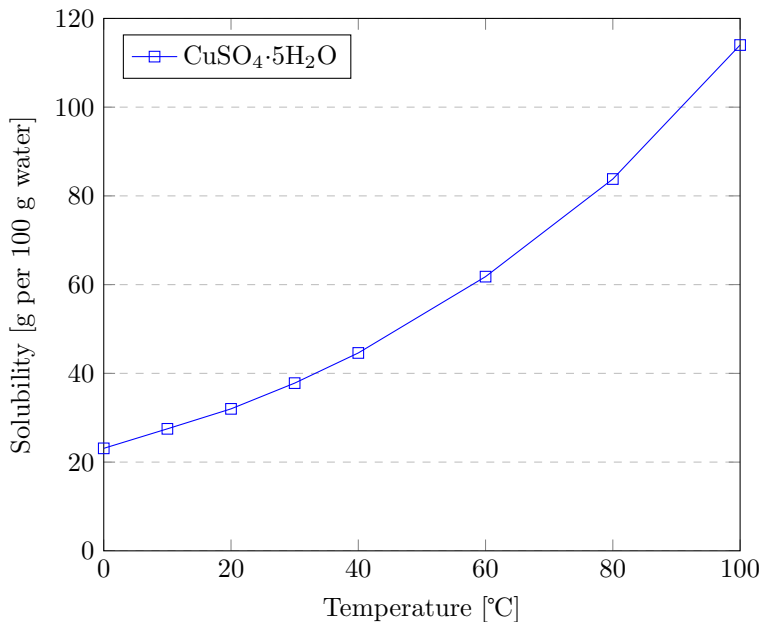

2D plots :

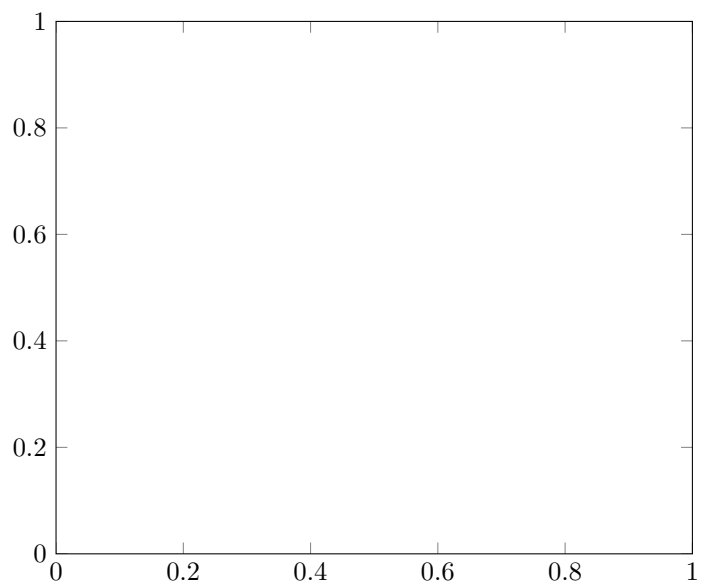

Plotting from data:

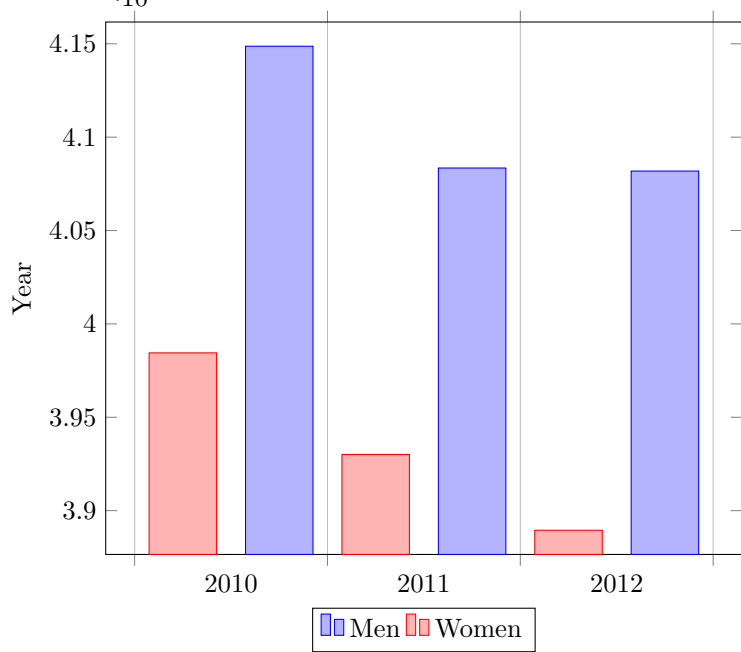

Temperature dependence of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ solubility

scatter plot uses the first two columns of the data:

Bar Graphs :
·10⁵

3D Plots

Example using the mesh parameter

$$\frac{\sin(r)}{r}$$
