Introduction

The canonical example is taken from page 142 of the TeXBook, although we've replaced

by LaTeX's preferred and

:

$$a_0 + \frac{1}{a_1 + \frac{1}{a_2 + \frac{1}{a_3 + \frac{1}{a_4}}}}$$

The default typesetting style can be amended by using the *command* :

$$a_0 + \frac{1}{a_1 + \frac{1}{a_2 + \frac{1}{a_3 + \frac{1}{a_4}}}}$$

Here's another example which demonstrates the effect of *and*:

$$\begin{aligned} f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \\ f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \\ f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \\ f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \end{aligned}$$
