

Display Style in Math Mode

Pete Doe

July 2, 2026

Introduction

The canonical example is taken from page 142 of the TeXBook, although we've replaced

by LaTeX's preferred and

:

$$a_0 + \frac{1}{a_1 + \frac{1}{a_2 + \frac{1}{a_3 + \frac{1}{a_4}}}}$$

The default typesetting style can be amended by using the *command* :

$$a_0 + \frac{1}{a_1 + \frac{1}{a_2 + \frac{1}{a_3 + \frac{1}{a_4}}}}$$

Here's another example which demonstrates the effect of *and*:

$$\begin{aligned} f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \\ f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \\ f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \\ f(x) &= \sum_{i=0}^n \frac{a_i}{1+x} \end{aligned}$$

Depending on the value of x the equation $f(x) = \sum_{i=0}^n \frac{a_i}{1+x}$ may diverge or converge.

$$f(x) = \sum_{i=0}^n \frac{a_i}{1+x}$$

Inline maths elements can be set with a different style: $f(x) = \frac{1}{1+x}$. The same is true for display math material:

$$f(x) = \sum_{i=0}^n \frac{a_i}{1+x}$$

$$f(x) = \sum_{i=0}^n \frac{a_i}{1+x}$$

$$f(x) = \sum_{i=0}^n \frac{a_i}{1+x}$$

$$f(x) = \sum_{i=0}^n \frac{a_i}{1+x}$$
